DETAILED ACTION

The following Examiners amendment is based on the claim listing filed on
10/12/2010:

In the claims:

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Drew Leyes on 07/11/2011.

Claim 42:

Line 1 **after** "The method according to claim" **delete** "38", and **insert** "39"

Allowable Subject Matter

1. Claims 21-25,27,29-31,33 and 35-42 are allowed.
2. The following is an examiner's statement of reasons for allowance:

After careful review of the arguments presented in the prior arguments, Examiner believes that the prior art taken alone or in combination fails to teach:

Claim 38:

“in an instance in which multiple language packages are determined to be associated with the language selected for the first user interface:

determine a language selected for a second user interface; and

select one of the determined language packages based on the language selected for the first user interface and the language selected for the second user interface for use by the speech recognition system”

Claim 39:

“in an instance in which multiple language packages are determined to be associated with the language selected for the first user interface:

determining a language selected for a second user interface; and

selecting, by the processor, one of the determined language packages based on the language selected for the first user interface and the language selected for the second user interface for use by the speech recognition system”

Claim 40:

“program instructions configured, in an instance in which multiple language packages are determined to be associated with the language selected for the first user interface, to:

determine a language selected for a second user interface; and
select one of the determined language packages based on the language
selected for the first user interface and the language selected for the second user
interface for use by the speech recognition system”

3. Further, all arguments directed to claims 38-40 were considered in light of the
specification and is believed to overcome the current references used for rejection,
particularly the closest:

(A)	US 20050114114 A1	20050526	Rudolph
(B)	US 6061646 A	20000509	Martino et al.
(C)	US 7130801 B2	20061031	Kitahara et al.
(D)	US 6963836 B2	20051108	Van Gestel

Reference (A) is the closest reference and teaches the concept of a first and
second language tied to a region of an interface, and reference (B) teaches languages
grouped or packaged together, however the combination of choosing a language
package based on two selections of languages with two different interfaces, are not
explicitly taught by the prior art of record. It is not obvious to modify either of (A) or (B)
with respect to one another to derive the allowed claim limitations indicated above.
There is simply no mention of a second user interface for any type of reference

Art Unit: 2626

whatsoever. Specifically, Reference (A) which is analogous to reference (B) with respect to language groups teaches speech recognition and language groups that are unique and not well known, such as Romance and Germanic. (A) deals with obtaining a language group for a user of a cell phone, where language groups are present that may have overlapping languages, for instance if a user chooses Spanish... groups for **Mexico** (Spanish and English)... and **Canada** (Spanish, English, and French) will appear. However, the groups are merely language groups for a network that provide only a single language to a single user. In (A), there is no referencing of a second user interface, but merely a network. For instance if a first user is subscribed to an English cell phone service but is vacationing in a Canadian territory, the first user will be able to use a foreign network that can provide English or French to foreign users. It is not obvious to one of ordinary skill in the art to say that, a network can be construed as a second user interface to derive a language package used that is common to a first user interface, particularly since a *single language translation* is the target goal. In no instance does (A) or the combination of (A) and (B) teach or suggest referencing a second user interface let alone selecting one of the determined language packages based on the language selected for the first user interface and the language selected for the second user interface for use by the speech recognition system.

Reference (B) teaches a speech recognition interface for a single user where multiple dictionaries are present, wherein each dictionary contains a different language to handle various languages input into a speech recognizer or language recognizer. (B)

Art Unit: 2626

goes on to teach that dictionaries can be grouped into a single group such as Romance or Germanic dictionary groups depending on language similarities which is well known globally. However, (B) does not teach or suggest a reference to any other users to uniquely group languages, wherein the dictionary groups of (B) are fixed groups.

Assuming arguendo that the language groups in (B) are not fixed, reference (B) is silent with respect to determining a language selected for a second user interface and selecting one of the determined language packages based on the language selected for the first user interface and the language selected for the second user interface for use by the speech recognition system.

Reference (C) teaches the communication between two users and the selection by each user of a display language on his/her phone, wherein only a single language is selected. While there is a second user interface referenced, there is no grouping of languages, let alone the presence of having two or more common languages for a first and second user. Reference (C) may therefore be non-analogous with respect to determining languages packages. (C) merely teaches the translation of one language to another within user interfaces.

Reference (D) merely teaches the capability of a user to select different products for speech recognition from various regions having different dialects. (D) is not analogous and does not teach or suggest the ability to determine a language selected for a second user interface or to select one of the determined language packages based

Art Unit: 2626

on the language selected for the first user interface and the language selected for the second user interface for use by the speech recognition system.

When searching for additional prior art for the limitation as recited in claims 38-40 the most relevant topics pertained to material from the same Inventor and Assignee but did not teach or suggest the aforementioned limitation of claims 38-40. Further, all claims dependent on claims 38-40 are allowed because they further limit their respective parent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
